Project Abstract Submission Form

Sec No-2	Team No-31	Project Title-Grievance & Support Ticketing System for Public Transport
-----------------	-------------------	--

1. Abstract

The Grievance & Support Ticketing System for Public Transport is a digital platform designed to improve the way passengers report complaints, request assistance, and track service-related issues in public transportation. The system provides passengers with a simple and centralized interface to submit grievances related to buses, routes, drivers, ticketing, delays, cleanliness, safety, and other transport services. Each complaint is automatically converted into a support ticket with a unique ticket ID, allowing users to monitor its status and receive updates until resolution.

The system also provides transport authorities and support staff with an administrative dashboard to view, categorize, prioritize, assign, and resolve tickets efficiently. Automated notifications and status updates help maintain transparent communication between passengers and authorities. The platform can maintain complaint records and generate reports to identify frequently occurring issues, service gaps, and areas requiring improvement.

By replacing manual complaint-handling processes with a structured digital workflow, the proposed system reduces response time, improves accountability, and enhances the overall passenger experience.
